Popular standard locks are vulnerable to lock bumping. Retrofit yours with DC1 and foil this common break-and-enter technique.

- › Patented bump-resistant lock cylinder
- › Design registered keyway
- › Secure, restricted key system

A disturbingly common lock vulnerability

Lock bumping is the simple, fast, and quiet break-and-enter technique that is now the first choice of many thieves. Tutorials are readily available on the internet. And many newer standard locks are vulnerable.

Foiling them is as simple as retrofitting your locks with DC1.

DC1 is a patented, high-security suite of lock cylinders lab-proven to be highly resistant to lock bumping. Designed in collaboration with the Master Locksmiths Association (MLA), DC1 replaces your existing lock (or locks) to more securely protect you and your assets.

Four reasons the DC1 lock is the smart security choice

- 1 High security.** A unique, patented bump-resistant system plus a pick-resistant key broach keeps wannabe-thieves at bay.
- 2 Unmatched flexibility.** DC1 offers cylinder housings to suit all major commercial and residential lock types, from mortice locks to leversets and deadlatches.
- 3 Superior quality.** DC1 components are designed in Australia to the highest standards and manufactured by lock-manufacturing experts with many years of experience.
- 4 Restricted system.** The key design is protected by Australian and New Zealand law: only designated master locksmiths may reproduce it, and only authorised users may request copies. You can even designate that multiple signatories are needed for new keys.

Lock bumping on the rise

The Australian Bureau of Statistics recorded 216,886 Unlawful Entry with Intent offences in 2010 alone.

Endorsed by the **Master Locksmiths Association**

The Master Locksmiths Association (MLA) is the peak industry body for locksmiths. An MLA-backed product means you're choosing a system that meets the highest security standards. Developed to fill a gap in the market when several 'bump-resistant locks' (now since removed from the market) proved to not actually be bump resistant, DC1 delivers the security and flexibility to effectively manage and protect your staff and premises.

Lock bumping is real. Protect yourself.
